

#### **4.3.1 Institution frequently updates its IT facilities including Wi-Fi**

The integration of IT resources in the teaching-learning process has significantly improved the quality of education in the college. Regular updates and improvements are made to the IT facilities, including Wi-Fi connectivity and computer labs, to ensure optimal usage.

Both teaching and non-teaching departments have access to desktop computers, printers, and scanners with internet capabilities. The college's internet facilities have been expanded throughout the campus, thanks to the support of AP Fiber Grid's 100 MBPS general line, 10 MBPS internal leased line, and BSNL broadband of 100 MBPS. The LAN system ensures seamless access to information and resources for faculty and students.

To enhance the learning experience, faculty members prepare and upload PPTs, video lessons, and LMS content for their respective classes. The college has a dedicated team that ensures uninterrupted printing and Xerox services, updates software, and installs antivirus on computer systems when needed.

The college's power backup is available 24/7 through uninterrupted power supply systems (inverters) ranging from 1.5 KVA to 5 KVA. The library is fully equipped with computers and internet facilities, and an integrated library management system automates the library's processes. The college is a member of INFLIBNET and N-list for e-resources.

The college boasts two computer labs, one EL lab, and a network resource center with internet-connected computer systems. Additionally, three rooms have been refurbished and equipped as digital classrooms, each with an all-in-one podium, LAN, server, Smart TV, speakers, and Wi-Fi devices.

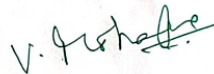

The college has also constructed a virtual classroom equipped with a LAN, LCD projector, camera, desktop system, speakers, and Smart Whiteboard, thanks to RUSA funding. The virtual classroom enables students to watch and interact with lectures delivered by renowned lecturers from distant colleges.

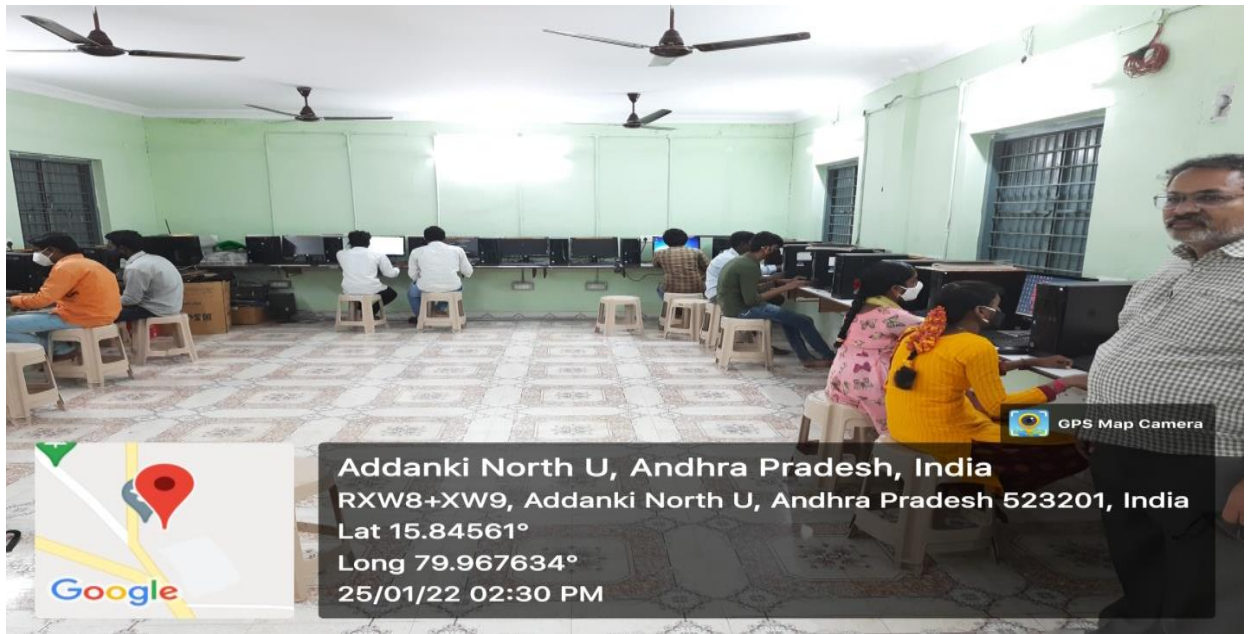

The college's facilities, including labs, libraries, sports arenas, computer labs, and classrooms, are well-maintained and used according to established protocols and practices. The college has established a dedicated RUSA committee responsible for managing and maintaining the infrastructure and physical amenities.

The state government budget provides annual funding to cover the college's lab expenses, while renovations are overseen by the RUSA committee. Additionally, the college regularly purchases scientific equipment, depending on the budget.

The college has an updated website that provides all essential information concerning academics and other activities. The college had an annual maintenance contract in 2016-17 to address electrical problems, computer maintenance, and UPS maintenance.

In summary, the college has made significant strides in integrating IT resources into the teaching-learning process, providing cutting-edge facilities, and ensuring uninterrupted access to information and resources. The dedicated RUSA committee and state government funding have played a crucial role in maintaining the college's infrastructure and providing a top-notch learning experience for students.
